

# Row-Independent Forage Harvesters

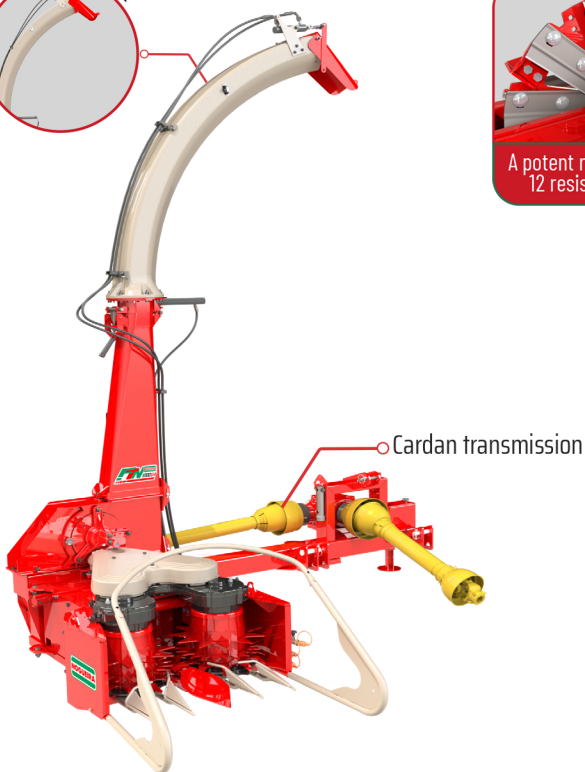

## The full package!

This is how the FTN 1000 is described: simplicity, versatility, and low consumption. Essential for excellent operational performance, it has an articulated gathering box, equipped with 4 rollers, which facilitates maintenance. The machine features a cutting head that allows harvesting of 2 rows of maize or sorghum planted up to a distance of 75 cm. Its design also allows high performance in the harvesting of grasses sown broadcast and sugarcane.

### SPECIAL FEATURES

New material in discharge chute

| Technical Features         |                             |
|----------------------------|-----------------------------|
| Production                 | Up to 35 TON/HR             |
| Chop size                  | 24 (From 2 mm to 36 mm)     |
| Number of rotors           | 1                           |
| Number of drums            | 2                           |
| Number of knives           | 12                          |
| Number of rolls            | 4                           |
| Drive                      | Tractor PTO Shaft           |
| Recommended PTO horsepower | From 65 to 95 hp            |
| PTO shaft needed rotation  | 540 or 1000 rpm (optional ) |
| Transmission system        | Gearbox or pulley           |
| Working width              | 1 m                         |
| Kernel Processor Sieve     | Included                    |
| Weight                     | 830 kg / 1830 lb            |
| Command options            | Semi hydraulic/ hydraulic   |
| Support wheel              | Optional                    |
